1

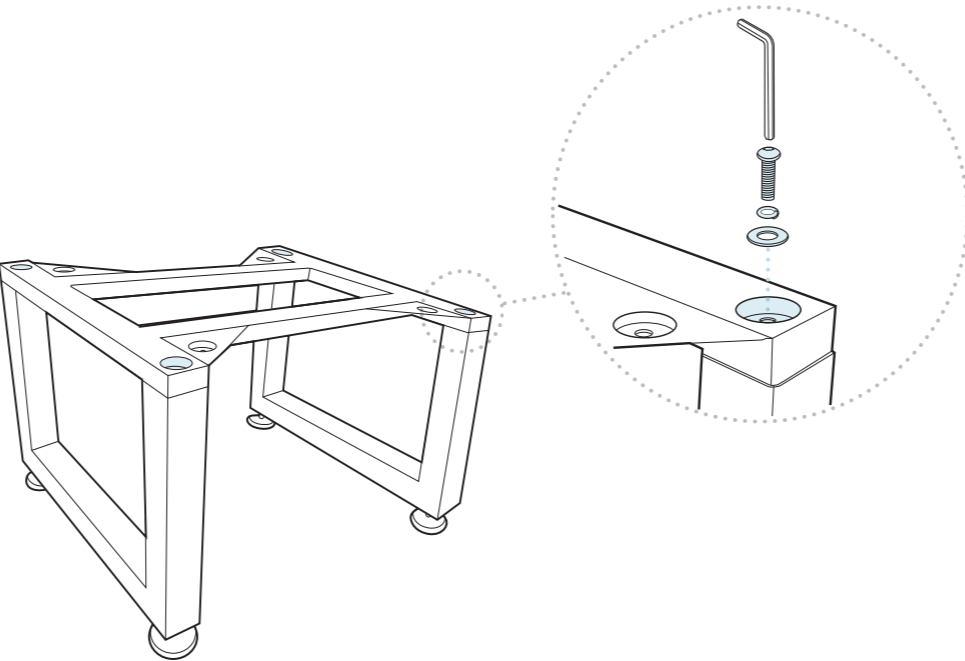

Remove the base and hardware pack from the box and set nearby. Unpack both sets of legs. Turn the base upside down, align the legs, and push into place.

2

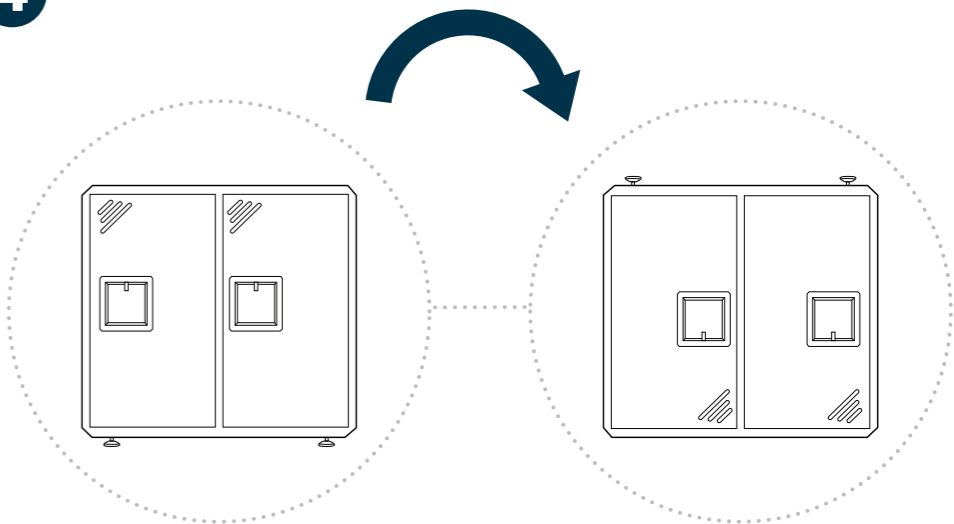

Once the legs are secured to the base, turn upright so the feet are on the ground.

3

Place one black lock washer and then one washer onto each bolt. Insert each bolt into each leg hole and tighten with the included Allen wrench.

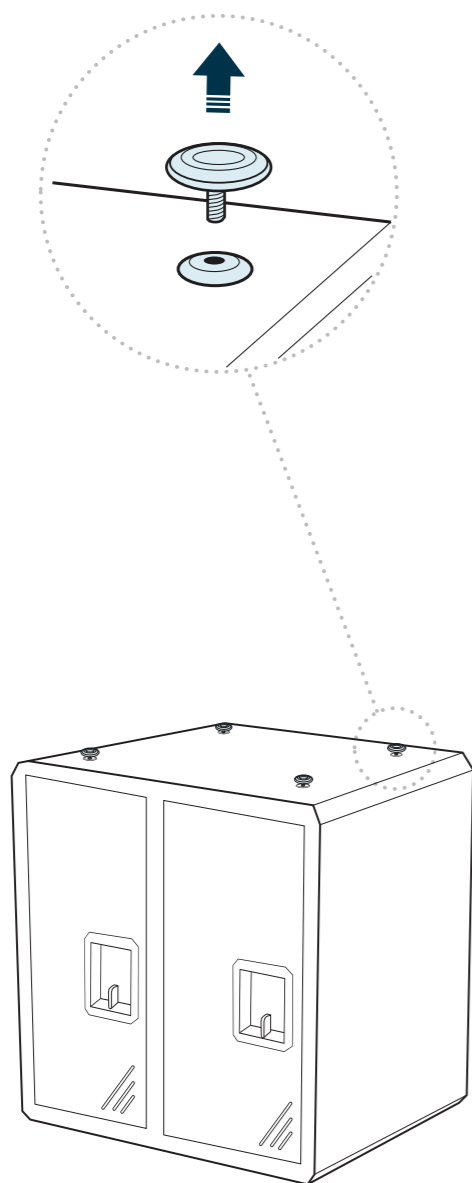

4

To secure to a Vari Locker (sold separately), ensure there are no items in the locker and, with 2 people, turn upside down.

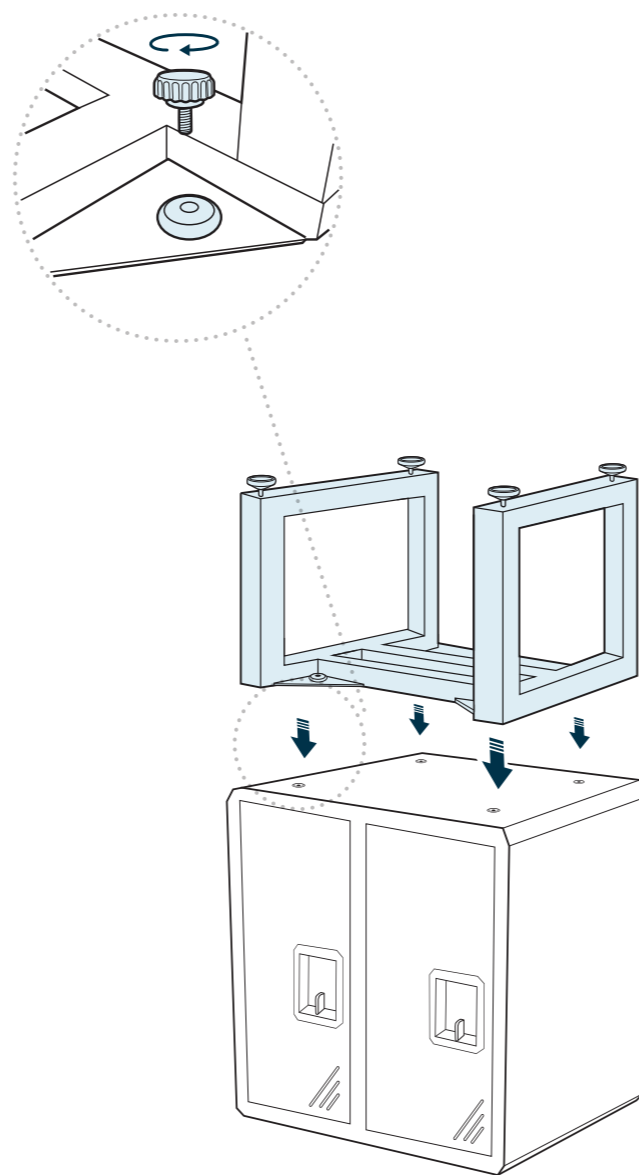

5

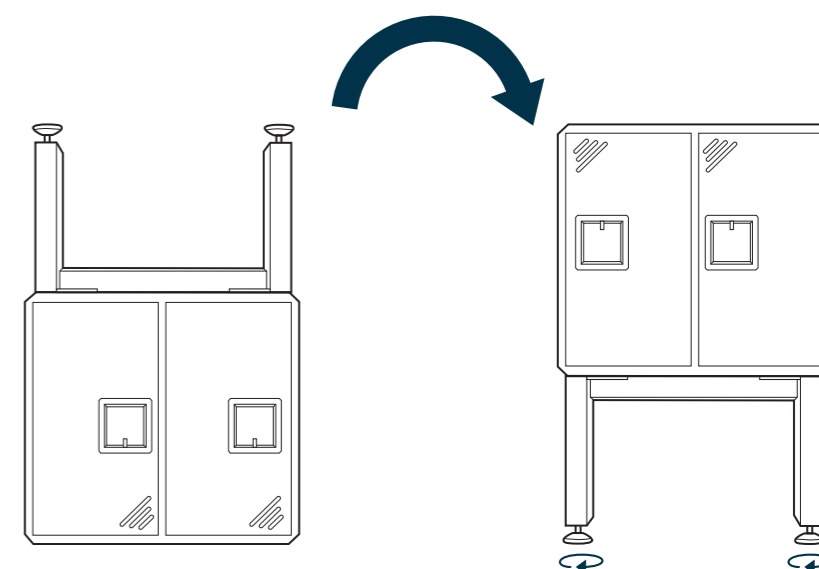

Remove feet from bottom of the locker.

6

Place the upside-down legs and base onto the upside-down locker unit. Use thumb screws to secure the base and legs to the bottom of the locker.

7

With another person's assistance, turn the whole unit right side up. Rotate feet to level as needed.

TIP HAZARD: In order to avoid unexpected tipping of stacked lockers, ensure all locker mounting connections are securely fastened.
